GOERNER GROUP

Packaging in the cycle of nature.
Innovation without limits.

We set standards in the
## modern packaging industry!

For over nine decades, we have been processing cardboards and cardboard waste into high-quality packaging and thus serve the complete value-added chain in industrial technology and the foodstuffs industry. We apply our know-how particularly intensively to the development of packaging with innovative materials and coatings. 100% recyclable and/or biodegradable.

The structure of the Goerner Group offers our customers complete, professional and flexible all-round support. We consciously have flat hierarchies in order processing and utilise innovation, technology and sustainability as far as possible. There are quick answers for any difficult tasks. We put ourselves into the minds of our customers and place the focus on economical solutions.

We have a tailor-made concept for each solution and use this as a basis to coordinate any possible synergies efficiently.

Sustainable and innovative
cardboard-based packaging
and new packaging materials

High-quality packaging solutions in the cycle of nature.
Food-safe and compostable.

Think economically,
act sustainably!

Every year, in Europe alone, around 3 billion tonnes of high-quality material ends up in landfill or incineration plants. Habitats become desolate, energy is wasted, nature starts to go awry.

This is reason enough to rethink the manner of using finite resources and to ensure their stability and the ability to regenerate these. With active measures and feasible concepts for development in relation to the environment and society, for the reduction of fossil fuels, CO_2 emissions, energy and water consumption and recycling of raw materials, we endow the term sustainability with life, respect and great value.

Our ecological footprint ensures that our company is able to conduct business in the future and ensures the success of our clients!
